DETAILED ACTION

Claim Rejections - 35 USC § 103

1. The following is a quotation of 35 U.S.C. 103(a) which forms the basis for all obviousness rejections set forth in this Office action:

(a) A patent may not be obtained though the invention is not identically disclosed or described as set forth in section 102 of this title, if the differences between the subject matter sought to be patented and the prior art are such that the subject matter as a whole would have been obvious at the time the invention was made to a person having ordinary skill in the art to which said subject matter pertains. Patentability shall not be negated by the manner in which the invention was made.

2. Claims 1-34 are rejected under 35 U.S.C. 103(a) as being unpatentable over Nikoden, Jr. Patent Number 4,426,935 in view of Schlueter Patent Number 2,853,752.

Nikoden '935 teaches all the limitations of the above claims except the specific use of a lock hook and clip body for the connector parts. Nikoden '935 teaches a securable enclosure with opening with door (12), top panel (20), back panel (22), side panels (24), bottom panel (26), front panel (28), posts (30), flanges (36, 38, 40, 42) at right angles, connector parts (46, 54, 58) for securing the flanges together, post (88) spaced from the panels extending from the top and bottom panels. Nikoden '935 further teaches that comparable connectors could be used to secure the panels. Schlueter '752 teaches a lock hook/clip body connector for securing panels of an enclosure (column 2, lines 11-12) in biasing one panel to another. It would have been obvious for one skilled in the art at the time the invention was made to modify the Nikoden reference with lock hook/clip body connectors for securing the panels together since it is held to be within the general skill of a worker in the art to provide such connectors as taught by '752 reference as a matter of design choice to provide a faster assembly of the enclosure.
